

PROJECT PROFILE

REPLACEMENT OF ELECTRICAL INFRASTRUCTURE

Nexgen Utilities was contracted by Newmarket Hydro to provide Electrical Engineering services to replace and upgrade an existing electricity distribution infrastructure for a neighbourhood within the Newmarket community, Eagle Hills. Nexgen Utilities oversaw the development throughout phases 1, 2 & 3. With Nexgen Utilities' expertise in Hydro Rehabilitation Engineering, we designed the distribution system as well as coordinated the field construction work. Introductory tasks included surveying the existing infrastructure and adjacent areas in order to gather preliminary engineering data. This project involved the replacement of transformers and underground cables, including the individual electricity service to the resident's home.

As part of our service, Nexgen Utilities is committed to maintaining a reliable electricity service with minimal interruptions and inconveniences.

CLIENT	Newmarket Hydro
